Description

When a data package is opened in the Data Package Editor, incorrect information is displayed for some of the originators. In particular, metadata documents with originators that have only an "organizationName" field (ie, no individualName) incorrectly display the individualName and address and other fields from the previous originator. It appears that a data structure is not being initialized when looping through the originators, so originator fields from previous originators are retained when displaying an originator that did not have that field.

An example of the problem can be seen by searching for and viewing the document 'nrs.3.2'.

History

#1 - 02/26/2002 03:03 PM - Dan Higgins

fixed by moving initialization of string variables inside the originator loop.

#2 - 03/27/2013 02:14 PM - Redmine Admin
