Description			
In Kruger park, when I tried to save a package into both local and oneline locations, it failed. The package was only online one and was imported a new data table.

The bug was fixed. The reason is in AbstractDataPakcage.serializeData method, we use one boolean variable existFlag to indicate if a package is existed. However, when user choose "Save both", it is not enough. So I use two variables existInLocal and existInMetacat to replace the one. It works now.

#2 - 12/04/2009 04:34 PM - Jing Tao

It was fixed. See above comment.
