Bugzilla-Id:	4271		
Description			
insert an options(echo = FALSE) in RExpression code without a matching options(echo = TRUE), and it will fail to output properly. I doubt many people will set such an option, but it caused me some problems. A simple options(echo = TRUE) at the beginning of output port processing should fix things up.			

History

I remember Kevin Drury had this problem ages ago (and neither of us knew enough about R to realize what the problem was).

Even if the RExpression script has echo=FALSE, we set it to TRUE before exporting objects to the ports.
