Target version:	2.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	4276		
Description <p>There is an as of yet unsubmitted patch that should fix collisions with symbols in record names that are invalid in file names. Specifically, the patch addresses the cases where:</p> <ol style="list-style-type: none">1. 2 ports have names that differ by reserved symbols2. both ports cannot be converted to native tokens and so are saved to disk and passed as file names <p>The problem arises because the committed code converts almost all non-alphanumeric characters to underscores (_) to create valid file names, creating potential collisions. There is some code to avoid this, but it is implemented before files generated by the firing actor ports are processed. In other words, the existing code can only avoid collisions with ports belonging to different actors and not similarly named ports on a single actor.</p>			

History

#1 - 10/21/2009 08:52 AM - ben leinfelder <p>about to submit the fix that oliver provided.</p>
#2 - 10/21/2009 08:53 AM - ben leinfelder <p>i had to add an extra display actor so that type checking did not fail on the second run of the workflow, but that's the only change i've made to oliver's workflow</p>
#3 - 10/21/2009 08:55 AM - ben leinfelder <p>included in r21133 now</p>
#4 - 03/27/2013 02:26 PM - Redmine Admin <p>Original Bugzilla ID was 4276</p>
