

EML - Bug #430

need DTDs to correspond to XSD files

02/14/2002 06:14 PM - Matt Jones

Status:	Resolved	Start date:	02/14/2002

Description

The current set of DTD files checked into the eml module do not correspond in a 1:1 way with the XSD files. In particular, 1) parameter entities were resolved (e.g., eml-dataset includes eml-resource) and should not be; and 2) multiple global elements in the schema should be represented as possible root elements in the DTD but in fact were eliminated. For example, in eml-entity, both "table-entity" and "other-entity" should be root elements in the eml-entity.dtd, but infact only "table-entity" is present because it caused some problems with the software we were using to parse DTDs. This needs to be fixed so that all appropriate elements are available.

History

#1 - 04/18/2002 09:28 AM - Chad Berkley

added entities back into the dtds. they now correspond to the xsd files.
