Description

The upload method in DataPackage class calls the method incrementPackagelds.

This method puts the metadata files into strings which is problematic for very large packages.

Also, data and metadata are treated identically which causes a problem when attempts are made to put ids into data file.

Also, upload attempts to see if a file is data by checking whether or not it is an xml file. This will cause problems if XML is ever used for data.

Should add method to check if file is a data file (using triples).

History

#1 - 03/29/2002 11:42 AM - Dan Higgins

modified code to use streams for datafiles rather than strings. Also changed the method to write new metadata file one at a time, rather than saving all as strings and then saving. Changed several methods to correctly handle binary data (ie Streams rather than readers)

#2 - 03/27/2013 02:14 PM - Redmine Admin
