

Kepler - Bug #4312

Clicking cancel on "sure you want to exit" dialog exits anyway

08/13/2009 12:08 PM - Chad Berkley

Bugzilla-Id:	4312		
Description			
If you have an unsaved workflow and you quit kepler, you'll get the "would you like to save your workflow dialog with "yes", "no", "cancel" buttons. If you click "cancel" kepler exits anyway without saving. It should cancel the shutdown process and leave the state the way it was. It should only continue shutting down if you click the "no" button or if you click "yes" then save the workflow.			

History

#1 - 08/13/2009 12:08 PM - Chad Berkley

I saw this on OSX, not sure if it does the same thing on windows/linux.

#2 - 08/13/2009 02:18 PM - Oliver Soong

I'm not seeing this on XP.

#3 - 08/26/2009 02:16 PM - Chad Berkley

This bug can cause you to lose your workflow if you accidentally quit kepler, then try to cancel quitting.

#4 - 09/16/2009 03:40 PM - Chad Berkley

I fixed this bug by using code from TableauFrame to handle the exit instead of using the exit action itself. The problem is, there is no way to tell what button the user clicked on the dialog from the action. This now behaves the way a user expects. If cancel is clicked, the exit is terminated.
