

Kepler - Bug #4390

Semantic Type tag deletion does not remove component from Ontology in the component library

09/15/2009 11:41 PM - Aaron Aaron

Status:	Resolved	Start date:	09/15/2009
Priority:	Normal	Due date:

Target version:	wrp-modules-2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	4390		
Description			
When I open a workflow that has a semantic type in the WRP suite I see the semantic type at the top of the window with a little x next to it. I press the x to delete the tag, in my case "Data Input". But the component still appears under Data Input in the Components ontology of the component library.

I'm a bit unclear on this behavior. If you're saying that the workflow still is returned on a search for its tag even after said tag was removed, well, that'd odd. That could be a result of the tag not actually being removed from the KAR file the workflow has been saved into (the KAR file is actually what is showing up in the component search).

If you mean that a tag you are adding continues to appear in the ontology even after the tag is no longer being applied to anything, then that is normal function.

close this bug, the component search is only searching over cached items so this no longer applies
