<b>Description</b>			
It was suggested that to be more in-line with historical functionality of the component library that the names of components (leaf-nodes) that can not be dragged to the canvas appear in light grey instead of black.

It's my guess that this will be hard to do, but will look into it.

My current thinking is to just assign appropriate icons to objects so people know what they are. Then a WorkflowRun or ReportLayout or PDF file is just not draggable to the canvas.

It is unlikely we will need/want to do this in the future. Closing this bug.
