

Kepler - Bug #4480

can't view more than one of workflow editor, report designer, and report viewer at a time

10/16/2009 09:47 PM - Oliver Soong

Description

It's a little frustrating to have to constantly find that little menu in the upper right hand corner and flip between the workflow editor, report designer, and report viewer, especially when I have more than enough screen real estate. If I open a composite actor, I get a new window. Maybe the report designer and viewer could open in similar new windows? It might also help resolve the problem of there being different "reports" for a workflow and for its composite actors.

I'm thinking of report designer and report viewer buttons. They each bring the appropriate window for that workflow into focus, opening/creating it if necessary. That's just my own thought, and any way to view things side by side should help.

History

#1 - 12/24/2009 01:16 PM - ben leinfelder

we've changed it a bit: two views - the "reporting" view has 2 tabs: layout and instance. but you do still have to switch to the WF and back to make changes to the model.

#2 - 01/05/2010 10:04 AM - ben leinfelder

retargeting to post-2/wrp

#3 - 01/14/2010 09:47 AM - ben leinfelder

This would be part of an entire Kepler UI redesign.

#4 - 01/14/2010 09:57 AM - ben leinfelder

save for later as open...
