Description

On r21314, I can no longer access the Kruger data. I believe this is due to some overly aggressive error checking on the data. The data packages (which are not directly under my control) have thrown errors on the console. I think this is due to negative numbers and zeroes in columns that are nominally whole numbers. In the past, there were non-fatal, but this is now major problem.

This change happened somewhere between r21218 and r21310.

The error message is specifically "Unable to parse the MetaData: Error parsing the eml package: Exception in DataTypeResolver"

History

#1 - 11/03/2009 05:22 PM - Chad Berkley

I think this is my fault. I'm trying to track it down now.

#2 - 11/03/2009 05:34 PM - Chad Berkley

This is a problem with some configuration values. I'll get this fixed tomorrow.

#3 - 11/04/2009 09:55 AM - Chad Berkley

Error in my configuration manager conversion code in DelimiterResolver. Fixed.
