

## Kepler - Bug #4526

multi-line entries can be put into text items in reports, but they are displayed on a single line

### Description

I'm not sure if this is a bug or an enhancement request. I guess it depends on what the intention was. Are text boxes supposed to be a single "line" like <P></P> in HTML, or are they supposed to be more powerful?

I can live with either way, but the interface should be consistent, and it would be nice to know what I'm supposed to be doing.

### History

This is desired behavior, as we do not want to assume that the user would like a new line whenever the text wraps in the text field in the designer. If the user would like to insert a new line they just have to enter a carriage return.
