Kepler - Bug #4534

add extra space before section headers when BREAK_BEFORE is false

11/05/2009 11:21 AM - Oliver Soong

Description

This is so incredibly trivial, but I can't lower the priority on this any more than it already is.

Section breaks, when BREAK_BEFORE is false, are tight to the previous content on the top, but there is plenty of room between the section header text and the section header horizontal rule. Right now, it looks like the section header text is part of the previous content, and it would look better if there were more space above the section header text.

A workaround is to add a couple of blank text entry boxes before the section header.
