<b>Description</b> Hi Jing,  Here is a copy of the local file (906.2) that I am having problems saving to the network. I am also having this problem with 903.3 901.4 904.7 917.2 910.4  For all of these data packages I have been able to save to the network before. The only new thing that I have done to each of these packages is import an MS access file (under the data drop down menu)  Thanks! Marissa

I took a look and found this module creates an xml like "<objectName></objectName>". This is valid in eml-2.0.0 and eml-2.0.1. But it is invalid in eml-2.1.0.

#3 - 12/10/2009 08:35 AM - Jing Tao

After fixing empty string issue on objectName, offline and attributeDescriptpion, now this module works. Both rick and I tested it. So it is fixed.
