| RExpression used to have the little R icon show up in the components tree (it was an easy way to find the RExpression actor without actually reading the labels). It's not there anymore. Not a problem per se, but it is a change in behavior. |              |                        |            |
