#### Description

When I went to epsilon and dev.nceas.ucsb.edu/tao/replControl.html (I tried both http and https )

It can update server list. But when I set up server and wanted force replication, it didn't work in both sites: can't bring all updated documents from remote hosts to this server ( web site said it should do it). In epsilon web site I got an error: error in ReplicationHandler.update: The root element is required in a well-formed document, In dev, I got Error in MetacatReplication.handleGetOrPost: null.

#### History

##### #1 - 04/18/2002 03:42 PM - Jing Tao

The force replication and delt replication command is not correct. It missed to specify server's name. And in wirt method of DocumentImpl.java, no matter the doc is belong to local host or remote host, it will be consider local host. This bug was fixed too.

Testing between dev and my local machine works fine.
