

Metacat - Bug #4573

LDAP and Register CGIs reference skin-specific templates in the common area

11/23/2009 10:00 AM - Chris Jones

Status:	New	Start date:	11/23/2009
Priority:	Normal	Due date:

Target version:	2.x.y	Spent time:	0.00 hour
Bugzilla-Id:	4573		

Description

This is a minor issue where the register-dataset.cgi and ldapweb.cgi scripts use a common templatesDir pointing to the location of the common Template Toolkit files, but NCEAS and PARC-specific skin templates are also located in that common directory. The CGIs need to be changed to separate the common vs skin specific templates. Once changed, the NCEAS and PARC properties files should reflect the change.
