Description

I'm able to delete a workflow tag when I shouldn't be to, that is after that workflow has been run. This used to work right; it wasn't possible.

- 1) open kepler
- 2) tag blank workflow "workflowTag"
- 3) execute, dismiss error
- 4) click on run, tag run "runTag1"
- 5) at this point, when context is still run, you can delete workflowTag

If you Export Archive this run, the workflowRun moml doesn't have the workflowTag, but the workflowTag is in the workflow moml, and undesired and inconsistent state.

History

#1 - 11/23/2009 05:28 PM - Derik Barseghian

If I relaunch Kepler, past run workflow tags are static (no X to click for delete). Which is good.

However, once I've clicked on a run and then click back to the canvas, the **run's** workflow tag stays visible, as if that tag were applied to the current, as yet un-run, workflow.

#2 - 11/23/2009 05:56 PM - Sean Riddle

That's an artifact of the way I update the tag display now. I'm looking into it.

#3 - 11/24/2009 04:12 PM - Sean Riddle

Should be fixed as of 21866.
