<b>Description</b> Create a workflow and report. File->Save Archive. The KAR should contain the ROML. File->Save Archive again, overwriting the original file. I sometimes get this error on the console:  ERROR (org.kepler.kar.handlers.ReportLayoutKAREntryHandler:saveReportLayout:292) Could not set LSID for ReportLayout: null  When it happens, the KAR loses the report layout.

Overwriting turns out not to be necessary. Simply File->Save Archive again.

The error occurs on the second File->Save Archive as long as the KAR is not closed and re-opened between.

New workflow, File->Save Archive, File->Save Archive: error  
Saved KAR, File->Save Archive: no error  
Saved KAR, File->Save Archive, File->Save Archive: error  
Saved KAR, File->Save Archive, close & re-open, File->Save Archive: no error  
Saved KAR, File->Save Archive, close & re-open, File->Save Archive, File->Save Archive: error

The workaround is to close and re-open the KAR after saving archives. Saving XML doesn't seem to matter.

#4 - 12/01/2009 03:08 PM - Oliver Soong

The workaround I suggested sometimes seems to trigger bug 4571, so it might be safest to restart Kepler after saving the archive.

#5 - 12/01/2009 09:25 PM - ben leinfelder

Because the model was being closed and reopened, we trashed the layout on the close (which happened after the "new" freshly saved KAR was opened) so the layout was not actually available for the second save.  
Now we will not destroy (in memory) the report layout for a workflow that is still open (in another kepler window).
