<b>Description</b> Different modules may have their own menu items. To realize it, the module should be able to add configuration properties to files like uiMenuMappings_en_US.xml. One special requirement for menu items is that the configuration property location matters. People want to add one menu item after/before a certain exiting configuration property. So I think ConfigurationProperty class should have interface like addPropertyBefore() and addPropertyAfter().			

History

#1 - 12/08/2009 12:32 PM - Chad Berkley

Added a method addPropertyAtIndex which allows the user to add a property anywhere into an existing ordering of nested properties. See ConfigurationManager.addPropertyAtIndex().
