### Description

ROML in KAR files is not being loaded.  This happens regardless of the LSID in the workflow and ROML matching the InstanceAuthNamespace.  This happens regardless of opening from a local repository or not.

This is happening at 22117, but I think I also saw it at 22111.  I'm guessing it has something to do with 22083, although I can't be sure.

## History

**#1 - 12/08/2009 12:17 PM - Oliver Soong**

Oh, and to clarify, 22083 was supposed to fix bug 4512 and 22117 was supposed to fix 4601.

**#2 - 12/08/2009 01:23 PM - debi staggs**

Do you mean that it is not showing up in the Library ?

**#3 - 12/08/2009 01:25 PM - debi staggs**

Nevermind, it's actually not in the manifest.  Checking into it.

**#4 - 12/08/2009 01:33 PM - Derik Barseghian**

I'm going to look into this. ROMLs, RIOs, and WorkflowRuns aren't being put into KARs anymore (at the filesystem level, they don't exist in the KAR).

**#5 - 12/08/2009 03:21 PM - Aaron Aaron**

This was a problem of the EntryHandlers being deleted from the configuration during conversion to the new Configuration system.  It should be ok as of revision 22136
