

Kepler - Bug #4618

First export of a run doesn't yield KAR with ROML

12/09/2009 03:44 PM - Derik Barseghian

Description			
I've introduce a bug in r22148:			
For the case where no report is made: the first export of a run doesn't put a ROML in the kar, and subsequent exports get a ROML and a RIO. For this scenario you previously got ROMLs and no RIOs each time (which seems right).			

History

r22150 should fix this, but I want to test it a bit more.
One oddity currently is that if you export a run, export it again to a second kar, then tag the run and export to a third kar, the serialized workflowRun entityIds in kar2 and kar3 are the same. I think they should be different.

#2 - 12/27/2009 09:51 AM - ben leinfelder

Would you just bump the run revision (entityId)? But then wouldn't that mean it's a different "run" rather than the same run with a new tag?

I found that if I don't layout a report (blank) I still get a ROML and a RIO for that run export. I think this should not happen for blank report layouts - fixed that.

#3 - 01/05/2010 09:43 AM - ben leinfelder

in the name of upcoming code freeze, I'm thinking this can be closed.
