<b>Bugzilla-Id:</b>	4663		

#### Description

This may not be a tagging bug but a bug in a provenance query or in KAR building -- sometimes a tag that shouldn't be in a workflow gets written into the workflow, and vice versa.

To replicate:

- open and execute a workflow
- tag the workflow and execute again
- export run1 to KAR

unzip KAR and look at the workflow moml, it contains the tag.

#### History

##### #1 - 01/12/2010 05:18 PM - Derik Barseghian

I suspect this is to do with the building of the KAR, probably with the way the workflow is fetched out of the ObjectManager (e.g. maybe a call to getHighestRevision). Talked with Aaron and it seems wise to punt on this until he's done w/ the KAREntryHandler refactor.

##### #2 - 03/30/2010 06:13 PM - Derik Barseghian

This is no longer happening. Maybe it was related to the bug in getHighestRevision fixed today in r23525.
