Description

Using version 1.1.0, I tried to "Delete Metacat Copy" on a package that only existed on metacat. The operation generated the error: "Error in DataPackage.DataPackage: String index out of range: -1". Obviously, it didn't work.

As a side effect, when I cleared the error dialog, the morpho butterfly in the result pane was still flapping away, even though I got the impression that the attempted delete operation was all done. So, we need to check that the butterfly stops flapping in all cases, including when errors are generated.

History

#1 - 04/12/2002 10:33 AM - Dan Higgins

I have been able to create and then delete several packages that were only on metacat, so the Delete problem does not seem to occur every time. I will check the code to check on why the 'flapping butterfly' does not quite when an error occurs. (Dan Higgins)

#2 - 06/10/2002 09:01 AM - Dan Higgins

SwingWorker class has been modified to insure the the 'flapping butterfly' quites after an error. Delete Metacat Copy seems to work fine in current version.
