

Kepler - Bug #4672

Workflow title isn't refreshed during run export workflow rename

01/14/2010 05:37 PM - Derik Barseghian

Status:	Resolved	Start date:	01/14/2010
Priority:	Normal	Due date:	
Assignee:	Derik Barseghian	% Done:	0%
Category:	workflow run manager	Estimated time:	0.00 hour
Target version:	wrp-modules-2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	4672		
Description			
If you export a run that's Unnamed1, you're prompted to give the workflow a name. If you give it a name, finish your export, you'll see the window hasn't changed names, it's still Unnamed1. And yet if you run this workflow again, the new run row shows the new name.

You're no longer prompted to rename an unnamed workflow during a run export. However, the following types of scenarios need to be tested once bug#4916 is fixed:

export a run with an unnamed workflow, then rename the workflow via e.g. the canvas context menu, then export the run row again. Compare the contents of the kars, and what workflow titles show up when you open those kars.

#2 - 04/15/2010 02:51 PM - Derik Barseghian

Closing this. You can get into some confusing territory with name tracking if you follow the scenario in comment#1, especially if you open the kar that was exported before the rename, and then run its workflow, but i'm not sure how to fix this. If people find it confusing, we may want to reevaluate the provenance workflow name rename feature.
