Description			
Make sure Morpho installs and runs on Windows 7			

History

#1 - 01/22/2010 03:02 PM - Jing Tao

Morpho installer couldn't be installed under c:\program files folder. Other than this, it worked. But morpho can be installed under c:\program files folder on Vista. It was an issue on vista as well.

#2 - 01/22/2010 05:05 PM - Jing Tao

Here is the story:

During the installation on windows 7, the installer told me that it didn't have the permission to create a new folder under c:\program files if I selected it as the destination folder. I had to choose another one, e.g., the user's home folder. After I chose the home folder, the installer installed morpho successfully. And morpho was running smoothly.

I had the same experience with window vista on the previous release. I managed to figure it out. Current morpho installer can install morpho under c:\program files on Vista successfully.

I will take a look to see how to fix the issue.

#3 - 01/22/2010 06:00 PM - Jing Tao

In installer/build/install-windows.xml, there is element named run-privileged. It can make the installer attempt to launch itself with administrator permissions. In previous version, an attribute named condition has the value - vista. This means that it only work for vista. After removing the condition, it works with windows 7.

I tried to install and uninstall morpho on windows xp, vista and 7. It worked well. So I am closing the bug.
