

Metacat - Bug #4698

ESA skin links are hard coded to data.esa.org

01/27/2010 09:45 AM - Michael Daigle

Status:	Resolved	Start date:	01/27/2010

Target version:	1.9.2	Spent time:	0.00 hour
Bugzilla-Id:	4698		

Description

The "ESA Registry" and "Search for Data" links in the ESA header are hard coded to go to data.esa.org. This causes issues on non-production systems when testing because you can inadvertently wind up on production.

The skin property values should be used for the home url.

History

#1 - 01/27/2010 09:47 AM - Michael Daigle

Updated the JSP pages to use the skin registryurl property. Need to look at the registry templates now

#2 - 01/27/2010 09:49 AM - Michael Daigle

templates look good
