| Description | | | |
| <p>Metacat has an administrative user, but that user only has a few capabilities. We need to enhance the privileges of the administrative user. In particular, they should be able to:</p> <ol style="list-style-type: none">1) Delete all data files and metadata files2) Change ownership on all data and metadata files3) Change permissions on all data and metadata files <p>There are probably additional services that should be enabled for admins, but these are lower priority and could be postponed to another bug if they would slow down implementation of 1-3 above:</p> <ol style="list-style-type: none">4) Initiate replication5) View logs (I think already implemented)6) Rebuild indices (I think already implemented) <p>...</p> | | | |

History

#1 - 11/17/2011 04:04 PM - ben leinfelder

Admin user[s] now have complete control of the Metacata data and metadata. The list of items here (1-6) are covered now.

Admins should be CAREFUL!
