Bugzilla-Id:	4734			

Description

Trying to run a workflow (xml or kar) from the ant task or the kepler.sh script results in an exception reading the special noGui configuration:

[run] java.lang.Exception: Failed to parse "ptolemy/configs/kepler/ConfigNoGUIWithCache.xml -runThenExit
/Users/leinfelder/workspace_kepler/kruger/workflows/tpc02-water-flow/tpc02-water-flow-base.kar"

History

#1 - 02/04/2010 12:43 PM - Chad Berkley

Removed kar entry handlers from the wrp ptolemy config file. actually just removed the whole file since it was totally redundant with the common config file. all KEH's are now stored in the configuration manager.
