

Semtools - Bug #4772

Annotation cell selection also selects data table cell

Description

It seems that part of column model sharing between the annotation table and the data table results in the cell selection also being shared. It's not a huge deal, but it does make the data table get marked as "dirty" and then you're prompted to save the changes even if you haven't made any changes.

I want the columns to continue to be aligned, but I want different cell selection models. Oh, and I also want the column selection models to be shared. Hmm...
