

Kepler - Bug #4807

GetMetadata does nothing

02/18/2010 11:49 AM - Oliver Soong

Status:	Resolved	Start date:	02/18/2010
Priority:	Normal	Due date:	
Assignee:	Jing Tao	% Done:	0%
Category:	data access	Estimated time:	0.00 hour
Target version:	2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	4807		
Description			
Search for any data, right click on a search result, and select the only option, "GetMetadata". This does not seem to do anything, and there are no errors on the console. There should probably also be a space in the label as well.			

History

I can see a error on console:

```
[run] ERROR: 'jar:file:/home/tao/project/kepler/core/lib/jar/kepler-styles.jar!/style/eml-2.0.1/eml-settings.xsl: line 164: Variable 'attributeindex' is multiply defined in the same scope.'
```

```
[run] FATAL ERROR: 'Could not compile stylesheet'
```

#2 - 02/19/2010 01:06 PM - Jing Tao

In eml module, duplicated parameters were removed on eml-settings.xsl and eml-identifiers.xsl. Use a new target in eml to generate a new kepler-style.jar. Now the kepler can show the metacat with new jar.
