Description

If you enter an annotation in the "Column Annotation" tab then switch to the "Full Annotation" view you will not see your changes until clicking* on the table.

*In fact the clicking triggers the column selection event which then saves the state of the annotation as it exists (including the now deactivated tab). And the change "shows up".

I suppose we can respond to the tab change event and save the annotation at that point too.

History

#1 - 02/22/2010 05:23 PM - ben leinfelder

When the tab is changed, a column selection event is fired which triggers the annotation to be saved as it currently exists - in turn updating the view.

This results in "extra" re-rendering work in some places (ie the metadata display area in the right).
