Description			
Both for the ESA and NCEAS data registries, information entered in the temporal coverage and spatial coverage sections does not appear on the review page that appears after submitting the initial registration form. This seems like an oversight, as all other fields on the form are presented for review.

fix in 1.9.2

The confirmData.tpl script was looking at module.temporal and module.spatial properties from esa.properties. These should have been modules.temporal and modules.spatial.
