

Semtools - Bug #4844

Dynamically resize Ontology selection fields

02/25/2010 01:32 PM - ben leinfelder

Description			
This used to work when I was using a label to render the ontology selection widget, but the text field does not resize to fit the full class name. This would help the madlib "read" better.

at the very least, the tooltip for them could read the full text so there's some way of seeing what the full classname is. the drawback to this is that it's also nice to hover over the field to see what the superclass is (oh this is for Entity). I'd leave that feature if it was blank, but use the subclass once a value was set.

#2 - 04/01/2010 04:53 PM - ben leinfelder

the tooltip is now much more helpful when the classname runs off the text area.

#3 - 04/26/2010 04:05 PM - ben leinfelder

the fields now have helping prompts underneath them. and the tool tip is great.
Dynamically resizing the fields was unpredictable and wrecked havoc on the layout of most of my panels.
Leaving as is for now.
