Bugzilla-Id:	4854		
Description			
Make one compete madlib for the column annotation. --- 1. I'd like to see the context annotation tab be folded into the column annotation tab. Specifically, I think the column annotation should contain two madlib sentences: The <characteristic> of the <entity> was recorded using the <standard> standard and the <protocol> protocol. The <entity> was observed <relationship> the <existing-entity> [Add...] Where [Add...] is a button that adds another context sentence that can be filled in.			

History

#1 - 03/04/2010 10:39 AM - ben leinfelder

Started by making the CustomList have a madlib string representation of the context entry. The template is such:
"The Observation was <relationship> the <observation>"
and looks like this in practice:
"The Observation was Within the TemporalPoint (when)"
This is still in it's own tab and is not a directly-editable madlib panel

#2 - 04/16/2010 09:53 AM - ben leinfelder

Context can be edited in place, madlib-style. There are add/remove buttons for the context entries.
They are still in their own tab due to space considerations.
