

Kepler - Bug #4870

searching for packages with the same name from multiple sources sometimes loses results

03/04/2010 02:23 PM - Oliver Soong

<b>Status:</b>	New	<b>Start date:</b>	03/04/2010

<b>Bugzilla-Id:</b>	4870		
<b>Description</b>			
I have packages soong.4.14 and soong.28.5 on DEV and soong.4.15 and soong.28.9 on KNB. They all have the same title. The DEV packages require authentication to access the data but not to search. The KNB packages require authentication to search and access the data. If I search authenticated KNB or authenticated DEV individually, I see 2 entries. If I search authenticated KNB and authenticated DEV at the same time, I only see 3. I think this is caused by the way search records are "uniquely" named.
