

Kepler - Bug #4881

RExpression outputs [false] for any matrix of booleans

03/12/2010 10:53 AM - Oliver Soong

Description

In an RExpression, add an output port "out" and use this R script:

```
out <- matrix(c(TRUE, FALSE, TRUE, FALSE), 2)
```

I get [false] as the output token, which seems to be because RExpression.java on line 1108 says:

```
mt = new BooleanMatrixToken();
```

instead of:

```
mt = new BooleanMatrixToken(valS);
```

or something similar. I'm not actually sure such a constructor exists, but it seems like it should given the other constructors in the lines before.
