| Test module installation system. | | | |

History

#1 - 04/16/2010 04:04 PM - debi staggs

I have implemented this solution now. A user can 'lock' the report layout if they haven't run or saved yet, so that if they click on the rows in the workflow run manager, they won't lose their changes accidentally. Also added a feature that warns them if they have not locked their report + the ability to turn that warning dialog off.

#2 - 04/16/2010 04:11 PM - debi staggs

Accidentally closed this bug, please disregard the last comment as it was intended for a bug # 4923.

#3 - 04/29/2010 04:50 PM - Chad Berkley

Module Manager is now working with http. Tested the switching between suites and it seems to be working well. Need verification from third party.

#4 - 04/30/2010 08:16 AM - debi staggs

Module system testing confirms that it is working well, and in the process of testing we also decided to make a few simple changes to the GUI, which will be entered as a separate bug. Also, it appears that some changes have been made recently to the PatchChecker class so I am leaving this bug open until David and Chad can confirm that there are no further additions / updates still pending.

#5 - 04/30/2010 08:47 AM - Christopher Brooks

Is the module installation system tested when I run "ant test" and as part of the nightly build?

#6 - 05/13/2010 01:40 PM - debi staggs

I think that this has been resolved. So closing for now, unless there are any objections.
