

Kepler - Bug #4925

Components search occasionally shows different results

04/02/2010 12:49 PM - Derik Barseghian

Description			
<p>I've been deleting KeplerData, doing a clean-cache, restarting Kepler, and then searching for 'sdf' a lot lately. Every so often the first search yields:</p> <ul style="list-style-type: none">- Wmsd Actor- SDF Director <p>However the majority of time, and on a subsequent search, I just get the SDF Director, as expected. This is really trivial and isn't causing me any problems.</p>

I was unable to reproduce this bug. If you only search for "sd" then you get bothe the SDF Director and the Wmsd Actor in the search results. But a search for "sdf" only returns the SDF Director.
