

Kepler - Bug #4969

Exported run-kar puts a roml at root of Components tree

04/30/2010 02:12 PM - Derik Barseghian

Status:	Resolved	Start date:	04/30/2010
Priority:	Normal	Due date:	
Assignee:	Derik Barseghian	% Done:	0%

Target version:	wrp-modules-2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	4969		
Description			
If you create a workflow and a report, run, export the run, you end up with a roml at the root level of your Components tree. It goes away on Kepler restart.			

History

#1 - 04/30/2010 04:56 PM - Derik Barseghian

Also the RIO.1.xml and RIO.1.pdf don't show up in the gui inside the KAR. This is a regression.
Also I'm not sure why the ROML shows up in the tree as "roml" when the filename is: Unnamed1_ROML.xml

#2 - 05/04/2010 01:38 PM - Derik Barseghian

fixed in r24213 (trunk) and r24214 (2.0)

#3 - 05/17/2010 12:28 PM - Derik Barseghian

This can happen again, though the replication procedure is different now (and i'm not sure what it is yet).

#4 - 05/19/2010 04:22 PM - Derik Barseghian

I can't find the replication procedure for this, or it's no longer happening. Please reopen if you see this.
