History

#1 - 05/07/2010 08:15 PM - Christopher Brooks

Until I can build an installer, I can't fix bug [#4990](#).

#2 - 05/20/2010 04:35 AM - David Welker

At this point, building installers is meant for releases. Later on, I would like to automate the entire install process and ensure that it works in all three

target environments. However, there is no intent to do so before 2.0.0. Closing the bug.

#3 - 05/20/2010 09:03 AM - Christopher Brooks

In the Kepler-2.0 tree.
Running "ant" yields

```
[exec] installer Builds the Kepler installers for Windows and Mac using IzPack.
```

Users will run "ant installer", they already have and reported errors.

Either "ant installer" should work or running "ant" should not mention "ant installer" or clearly indicate that it won't work.

Also <https://kepler-project.org/developers/teams/build/building-kepler-installers> should be updated.

Until "ant installer" works, this bug should remain open.

Under Mac OS, "ant installer" fails with:

```
