| Description <p>Metacat will be used within DataONE as both a Member Node and as a component of the Coordinating Node infrastructure. We need to add support for the proper REST APIs for DataONE, which are described here:</p> <p>http://mule1.dataone.org/ArchitectureDocs/index.html</p> <p>Initial support should include the following methods:</p> <p>MN.get() MN.getSystemMetadata() MN.listObjects() CN.create() CN.update() CN.get() CN.getSystemMetadata() CN.resolve()</p> <p>These tasks are a DataONE project, and so details are being tracked in the DataONE ticket system (http://trac.dataone.org). This is a tracking bug for the feature overall.</p> | | | |
