

Kepler - Bug #5029

Parameter changes can be committed without clicking the commit button

05/25/2010 11:25 AM - Sean Riddle

Status:	Resolved	Start date:	05/25/2010
Priority:	Normal	Due date:	
Assignee:	Chad Berkley	% Done:	0%

Target version:	2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	5029		
Description			
1) Double-click on an actor and change a parameter. 2) Click the add button to trigger the "add parameter" dialog 3) Click Cancel			
At this point, you're dumped back to the canvas, and your alteration to the parameter of the actor has been committed. Seems like the preferred behavior is either dumping the user back to the canvas with all changes rolled back, or (even better) just return the user to the normal parameter change dialog after they're done with the add parameter dialog.			
I've managed to produce this on the RC3 installer on Windows XP, and on the Kepler trunk on a Mac.

This is a duplicate of 4869. Fixing this before Kepler-2.0 is not advised as the problem involves modal dialogs. A failure here would lock up Kepler.

I agree that it is a bug though.
