| Description | | | |
| Under the 2.0 branch and RC4, I don't see the Modules Documentation menu item. This menu item exists on trunk. I tried the 2.0 branch on windows and mac, and RC4 on windows. | | | |

Derik, are you talking about release candidate 4 or are you talking about what is currently in svn in kepler/releases/release-branches/build-area-2.0 ?

I just did a fresh check-out from svn, and the menu does appear to be in it. I will check out rc4.

#2 - 06/08/2010 10:32 AM - debi staggs

I just checked rc4 and the moudles documentation menu item is available as expected in it as well.

#3 - 06/08/2010 10:48 AM - Derik Barseghian

I've retried with a fresh checkout of 2.0 and the menu item is missing. I also retried after deleting KeplerData and an ant clean-cache on a second computer, and it's missing.

The menu item is not missing in trunk, it's missing in the 2.0 branch and (therefore also) RC4. Try deleting KeplerData and ant clean-cache before restarting kepler from the 2.0 branch.

O.K. deleting KeplerData did it, now I can confirm that it is missing. Strange though, since I think it was in rc3 (?). O.K. it appears that it was actually commented out in the uiMenuMappings in kepler_2.0. Does anyone know if this was done for a particular reason ?

Anyways, I uncommented it for now. However, I can see that it might not be very useful for the basic Kepler installation.
