Bugzilla-Id:	5049		
Description			
At some point in Figure 6(https://kepler-project.org/developers/incubation/kepler-engineering-view-for-reap/engineering-view-plans), the user should be prompted for credentials to be able to connect to and view the remote runs of a workflow in the workflow run manager. I'm not sure yet when and how this should work. We need to consider credentials for the scheduler and the provenance store.

History

#1 - 06/28/2010 04:24 PM - Derik Barseghian

Add new tab in Preferences for configuring remote stores.

#2 - 11/05/2010 01:44 PM - Derik Barseghian

This new tab is no longer relevant, we've decided to use the existing Components servers as remote stores.

(In reply to comment [#1](#))

Add new tab in Preferences for configuring remote stores.

#4 - 01/31/2011 12:06 PM - Derik Barseghian

Prompting for credentials when connecting a WRM to a remote kar-store happens now, if the user has selected the 'authenticate' checkbox. However I'm still not sure I'm happy with the gui, I'm going to ask others for feedback.

#5 - 02/01/2011 05:06 PM - Derik Barseghian

I removed the authenticate checkbox at r26873. Now like Component search you're just prompted to login (if you're not already) the first time you choose a remote repository from WRM.
