Bugzilla-Id:	5062		
Description			
How and where will the user be prompted for credentials for the workflow scheduler? For connecting to a remote provenance server? How will a workflow be run on a remote kepler server if it requires authentication to be able to get access to a datasource? Discuss with Matt and Jing and create bugs, mockups and updates to engineering view page.

These mockups never got made, but authenticating for the scheduler and the WRM is done now. Both use the authentication manager. We don't connect to remote sql provenance stores, so nothing special was done for that.
