#### Description

(Ben L. was an eyewitness to this - 6.29.2010)

Running Windows 7 Enterprise.

I have added six data objects/tables to an existing Morpho Data Package (knb.245.x) and am adding access permissions to each table using the

Data/Edit Data Table Access wizard. I add custom access permissions for two individuals on the first three tables, clicking the OK button at the bottom of each dialog but NOT saving the package between data tables.

Problem: As I click through the Data Package Editor tabs corresponding to each data table, Morpho performance slows dramatically, until, after the third tab/table, Morpho has ground to a halt and I have to wait 5-10 minutes for the menu bar items to change from grey to black.

After one of these long waits, when I save the package (local), the save takes about three minutes.

This makes it very difficult to move forward in a Data Package editing session.

Last week when a similar thing happened, the Metacat had crashed and Morpho had locked up. But that did not happen in this case. Performance is just incredibly slow.

I don't have any degradation after editing data entity access for multiple data entities in knb.245 - on OS X 10.6. I'm not sure how or why this would be a Windows 7 bug.
