

Kepler - Bug #5075

Fix the module manager so it can show docs with any name.

06/30/2010 08:50 PM - David Welker

Description (11) Fix the module manager so it can show docs with any name. Currently, the module manager only displays documents named in a certain way. Instead, it should show every document in a given folder. This would allow multiple documents to be associated with a module and for more descriptive names to be selected for documents available from the module manager.
