

Kepler - Bug #5086

Report instance does not show in viewer after kar open

07/09/2010 01:15 PM - Derik Barseghian

Status:	New	Start date:	07/09/2010
Priority:	Normal	Due date:	
Assignee:	Derik Barseghian	% Done:	0%

Target version:	reporting-2.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	5086		

Description

When opening a run kar that contains a report instance, the report instance viewer does not show the pdf. If a kar contains a report instance, it also contains a run, and so when you open the kar, the run is imported (or not if you already have it). So you may always get at this report instance by clicking on the run in the workflow-run-manager, but this is far from ideal -- the report instance should just be shown in the report instance viewer after you open the kar.
