

Kepler - Bug #5087

Image report items aren't shown when original image path doesn't resolve

07/09/2010 01:19 PM - Derik Barseghian

Status:	Resolved	Start date:	07/09/2010
Priority:	Normal	Due date:	
Assignee:	Derik Barseghian	% Done:	0%
Category:	reporting	Estimated time:	0.00 hour
Target version:	reporting-2.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	5087		
Description			
Image report items aren't shown in the layout viewer or instance viewer when the original image path doesn't resolve...despite the image data being embedded in the rios. The pdf has the image, but to get at this, the user must unzip the kar, and open the pdf w/ an external application.			

History

#1 - 07/09/2010 01:43 PM - ben leinfelder

The embedded images should (and I believe used to) be decoded from their base-64 characters and made into an image file (I believe somewhere in the neitherregions of .kepler)

#2 - 07/09/2010 04:30 PM - Derik Barseghian

Worked w/ Ben to fix this in r25094 on 2.0 branch.
Needs to be merged into trunk.

#3 - 01/03/2011 12:19 PM - Derik Barseghian

This was merged into trunk. Just tested, works.
